## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2 are rejected under 35 U.S.C. 102(b) as being anticipated by Alvira et al (Molecular modeling study for chiral separation of equol enantiomers by beta-cyclodextrin, vol. 240, issues 1-5, 1999, pp. 101-108). Alvira teaches the separation of R-equol from the S-equol, which meets the limitation of a composition comprising R-equol. See reference. Note R-equol is the only required component for the composition claims.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 5 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alvira et al (Molecular modeling study for chiral separation of equol enantiomers by beta-cyclodextrin, vol. 240, issues 1-5, 1999, pp. 101-108) as applied to claims 1-3 above. Alvira teaches all that is recited in claims 1-3 except for the R-equol being present in 90 or 96% enantiomeric purity. An artisan provided the technique of Alvira

Art Unit: 1616

would have been able to optimize the purity of R-equol through routine experimentation even to the level of 90 or 96% purity.

*Response to Applicants' argument*

Rejection of claims 1,2,4,5 and 29 using Alvira will be maintained in light of amendment filed 8/27/07 for reason on record and reason as follows. Applicant argues that Alvira provides no description of actual separation of a racemic or mixture of equol into the R-equol and S-equol enantiomers and that Alvira does not disclose the presence of a solvent being combined with equol. Examiner acknowledges that Applicant claims are to the R-equol. However, the Examiner also acknowledges that Applicant's claims employ "consisting essentially of" language, which does not exclude the S-equol (see instant claims 4 and 5). For this reason, the rejection of record is maintained.

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 1616

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 2 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 2 of copending Application No. USAN 10/625,934. Although the conflicting claims are not identical, they are not patentably distinct from each other because instant application consists essentially of R-equol and USAN '934 consists essentially of S-equol. Neither invention excludes the other enantiomeric form.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
